

CENTUM VP AND PROSAFE RS ENGINEERING

OBJECTIVE:

This course enables participants to learn and understand the Centum VP and Prosafe-RS concepts. It helps the participants to perform generation of DCS feedback control functions operator station displays functions, sequence control functions, sequence logic functions and graphic panels using DCS system. Also, the participants are exposed to Safety PLC concepts.

DURATION: 5 Days

PARTICIPANTS: For instrumentation engineers involved in software generation or modification on the CENTUM VP and Prosafe RS systems.

PREREQUISITES: Participants should preferably have some basic knowledge of Centum VP DCS and Concepts of Safety system.

COURSE CURRICULUM:

Day-1	Centum VP overview
	Centum VP System Architecture
	Project Attribute Utility
	Project Creation
	IOM creation
	Open Loop and Closed loop creation
	Faceplate and tuning window
	Concepts of Alarms

Day-2	Cascade Loop
	SPLIT loop configuration
	Signal selectors
	Creation of control group windows
	Trend configuration
	CALCU block
	Practice

Day-3	Concept of Digital Signals
	Interlocks-Sequence Table ST16 and LC64
	Global Switch
	Motor Control Logic
	Graphics Generation
	Tag Search
	Report Generation
	Hardware Demo and trouble shooting

Day-4	Concepts of Safety PLC
	Introduction to Workbench and Project Creation
	Safety Logic Creation-ANLG_S
	Integration with CENTUM VP using test function

Day-5	Debug mode, IO Lock Window and Forcing Functions
	SCS security Functions
	Downloading
	Analysis of Historical report and process report
	SOE configuration and viewing
	Hardware Demo and trouble shooting
