

CENTUM VP BATCH ENGINEERING (VPBE)

OBJECTIVE: This course enables participant to perform generation of Centum VP Batch Engineering functions, SEBOL programing,

DURATION: 5 Days

PARTICIPANTS: For instrumentation engineers involved in software generation or modification on the Centum VP system Batch.

PREREQUISITE: Participants should preferably have some basic knowledge on process measurement, control and Centum VP engineering.

COURSE CURRICULUM:

Day-1	Training registration
	Introduction to Batch Automation Overview and its terminologies
	Introduction to Batch Concepts
	ISA S88.01 -Batch Control Standards
	Familiarization with example Batch Processes
	Overview of Centum VP Batch Packages

Day-2	Batch Engineering activities defining Plant Hierarchy
	Sequence library, SEBOL user function
	Unit Supervision
	Management of shared resources
	Concepts of resident & non-resident recipes.

Day-3	Basics of batch engineering
	Deviation of Batch operation from recipe
	SFC sequences, operations and flashes
	Basics of SEBOL batch control languages
	Operations on SFC functional blocks

Day-4	Process Management & Recipe Management
	Batch Trains/paths concept
	Concept of Trains and Path
	Project Management
	Batch Execution Management & Monitoring screens

Day-5	Exceptional handling & Batch report
	Exception handling topic
	Custom state transition matrix
	Batch report concepts & builder
	Access control concepts & builder
	Batch Trend
