

FAST TOOLS ENGINEERING (FTEG)

OBJECTIVE : The purpose of this course is to enable the user to set up and configure the FAST/TOOL system. The user will be able to generate or modify the operation station display, graphic panels. The user will learn to configure and maintain the FAST/TOOL system.

DURATION : 5 Days

Target: For instrument engineers involved in software generation or modification on the FAST/TOOL system.

Prerequisites: Participants should preferably have some basic knowledge on process measurement and control.

COURSE CURRICULUM :

Day-1	Introduction of Fast Tool Overview
	Installation of Fast Tool Server Software
	Identification of Fast tool software part numbers as per specification
	Fast tool software License request
	User Authorization & configuration in Fast Tools
	Alarms & Events Configuration in Fast Tools
Day-2	Creation of database (POINTS , ITEMS ,STATIONS) in Fast Tools
	Fast Tool Graphics Symbol's creation
	Fast tool Graphics displays creation
	Fast tool symbols usage in displays
	Creation of dynamic parameters for either symbols or displays
Day-3	Historization
	Trend Functionality
	Alarm Analysis

Day-4	Creation of lines and stations for various types of communications (ex: Modbus TCP-IP ,Modbus serial ,VNET etc) in Engineering Module
	Trend configuration in Fast Tools
	HAC configuration
	SCADA Host to Host configuration

Day-5	Debugging
	Setup Files Editing
	Back-up and restoration
	OPC interface and tag linking
