

FIELD BUS BASICS & ENGINEERING & PLANT RESOURCE MANAGER (FPRM)

OBJECTIVE: This course enables participants to learn the Field Bus protocol & PRM and its interface with the DCS.

DURATION: 3 Days

Target: For instrumentation engineers involved in software generation or Modification on system comprising of Field Bus Instruments.

Prerequisites: Participants should preferably have some basic knowledge on process measurement and control.

COURSE CURRICULUM:

Day-1	Field Bus Concept
	FF Technology Overview
	FF System Architecture OSI Reference Model & Communication Layer Concept
	Fieldbus Hardware Components
	Wiring Topology
	Segment Design

Day-2	Field Bus Application
	Device Management
	Device Information Files
	Foundation Field bus Function Blocks
	Interoperability
	Manual and Auto Registration of Devices
	Device Panel
	Block Parameters
	Interfacing Field Bus Instruments with DCS
	Field Bus Engineering
	Function Block Configuration
	Function block Scheduling
	Overview of PRM

Day-3	Introduction to PRM
	Network view PRM system configuration
	PRM components and overview
	PRM server, PRM client
	PRM field communication server
	Device master
	Views In PRM
	PRM functionalities
	Control module status
	Device details/Device Path/Device Registration
	Creating a typical hierarchy for the modules
	PRM security functions, permissions
	Upload and download parameters
	DTM works
	Parameter manager
	DD menu
	Comparison of device parameters
