

FIELD INSTRUMENTS FOR PROCESS CONTROL (FIPC)

OBJECTIVE: This course is designed to give participants the opportunity to learn the field devices, Measurement principle and calibration methods.

DURATION: 5 Days

PARTICIPANTS: For instrumentation engineers engaged in software generation or modification of system comprising field instruments.

PREREQUISITE: Participants are encouraged to possess basic knowledge of process measurement, control.

COURSE CURRICULUM:

Day-1	Introduction to Instrumentation Basics
	Instrumentation Standards
	Introduction to Industrial Measurement techniques
	Pressure Measurement
	Principle & operation of Pressure Transmitter
	Field mate installation
Day-2	Temperature Measurement
	Principle & operation of temperature Transmitter
	Flow Measurement
	Principle & operation of Flow Transmitter
Day-3	Level Measurement
	Principle & operation of Level Transmitter
	SLPS & recorders
Day-4	Flow Measurement
	Principle & operation of flow Transmitter
	Working with the skids

Day-5	Introduction to Calibration
	Calibration of Magnetic Flowmeters
	Calibration of dp pressure Transmitter
	Calibration of Temperature transmitter
	Calibration of Level transmitter
	Modbus serial communication configuration
