

PROSAFE RS Engineering (PPRS)

OBJECTIVE: This course enables participants to learn to perform generation & modifications of control loops, setting up HMI functions, database transfer, decoding error codes of Prosafe RS system.

DURATION : 5 Days

PARTICIPANTS : For instrumentation engineers involved in software generation or modification on the Prosafe- RS system.

PREREQUISITE: Participants should preferably have some basic knowledge on process measurement and control.

COURSE CURRICULUM :

Day-1	Introduction to Safety System
	Comparison of DCS and SCS
	Safety Standards
	SIL Level
	Safety System Hardware Architecture
	System Configuration
	Safety Control Unit
	Safety Node Unit
	SENG Configuration
	Addressing of Stations
	Domain Concept

Day-2	Introduction to Workbench
	Project Creation
	Screens of Workbench
	Link Architecture
	Hardware Architecture
	I/O Wiring
	Dictionary
	I/O Variable Creation and Wiring
	Introduction to FBD
	FBD logic using digital signal
	Configuration of SCALER Block
	Configuration of FILTER Block
	Configuration of MUX Block
	Configuration of SEL_R Block

Day-3	Configuration of TON,TOF Block
	Configuration of REPEATTIMER Block
	Configuration of CTU Block
	User Defined Function Blocks
	Configuration of ANLGVOTER Block
	Configuration of ANLGI Block
	Configuration of ANLG_S Block
	SCS Security Function

Day-4	Offline Download
	Online Download
	I/O Lock Window
	Forcing Function
	Introduction to Integration with CS3000
	Engineering in SENG Station
	Engineering in CS3000 Station
	Function Blocks for Integration ANN PASSWD OVR_R

Day-5	Function Blocks for Integration MOB_11
	SOE Viewer
	SOE Function Blocks
	SCS Maintenance
	Introduction to Ladder Logic, Structure text
	SCS Link Transmission
	Version Management Tool
