

Programmable Logic Controller & SCADA System

OBJECTIVE : The purpose of this course is to enable the user to set up and program the PLC system. The user will be able to program the field controllers using the Logic Designer and the IEC61131-3 programming tools. The concepts of IEC61131-3 programming are introduced. The user will learn to configure and maintain the SCADA (FASTOOLS) operational environment.

DURATION : 5 Days

Target: For instrumentation engineers involved in software generation or modification on the Stardom system.

PREREQUISITES: Participants should preferably have some basic knowledge on process measurement and control

COURSE CURRICULUM :

Day-1	Introduction to PLC concepts
	Types of PLCs
	PLC System Configuration
	PLC Hardware Configuration
	Stardom PLC-case study

Day-2	I/O Configuration
	Logic Designer Overview
	Program Organization
	Project creation
	Generation of Control Application
	Data and Variables

Day-3	IEC61131 programming tools
	NPAS POU Function Blocks
	Ladder Diagrams

Day-4	Structured text
	Debugging
	Introduction to SCADA system
	Human Machine Interface Functions
	Fast/tools concept
	Configuring Stations & process variables
	Creation of Symbols
	Creation of Mimics

Day-5	Configuration of Alarm Environment
	Historical Event Management
	Graphics Development
	Object Definition
