

CENTUM VP FUNDAMENTALS & ENGINEERING

OBJECTIVE: This course enables participants to learn and understand the Centum VP. It helps the participants to perform generation of DCS feedback control functions operator station displays functions, sequence control functions, sequence logic functions and graphic panels using DCS system.

DURATION: 5 Days

PARTICIPANTS: For instrumentation engineers involved in software generation or modification on the CENTUM VP system.

PREREQUISITE:

Participants should preferably have some basic knowledge on Centum VP DCS and Concepts of Safety system.

COURSE CURRICULUM:

Day-1	Training registration
	Introduction
	CENTUM VP overview
	CENTUM VP system architecture
	Types of FCS
	Address setting
	Introduction to CENTUM VP engineering
	Project creation
	Project attribute utility
	IOM creation
	IOM builder settings
	Creation of open loop
	Creation of closed loop
	Introduction to FCS simulation
	Concept of download
	Offline download

Day-2	Online download IOM load
	System defined windows. Faceplate Tuning
	Practice session

Day-3	Creation of Cascade loop
	Signal selectors
	Configuration of FOUT block
	Configuration of SPLIT block
	Concept of discrete I/O's, switches
	Concept of interlocks

Day-4	Introduction to sequence table
	Configuration of sequence table Timer Counter
	Configuration of logic chart
	Calculation Blocks
	Practice session

Day-5	Configuration of MC-2 block
	Configuration of MC-2 in logic chart
	Overview window
	Graphics window
	Trends
	Downloading
	Practice session
